# Aircraft Digital Company

Asset Management

We offer a wide range of services tailored to support the aviation maintenance and operational ecosystems. We specialize in asset lifecycle management and offer supporting solutions for operators, lessors, OEMs, CAMOs, and MROs. Our goal is to deliver efficient, optimized on-site and offshore solutions that enhance aviation management and ensure smooth operations for all stakeholders.

Production Support

Our Production Support services ensure aviation assets are manufactured to the highest standards of quality, safety, and compliance. Tailored for OEM's and other key stakeholders, this phase offers a range of solutions designed to support aircraft production, focusing on physical inspections, technical documentation support, and back-office operations.

Delivery and Entry Into Service

Our Delivery and Entry Into Service (EIS) services are tailored to support your organization throughout the construction, delivery, and operational integration of your aviation assets. We specifically address the needs of Operators and Lessors seeking a partner with on-site technical and negotiation expertise to guide them through each step.

Maintenance Operation

Our services are designed to help operators achieve peak asset performance and ensure compliance throughout the asset's active life-cycle. We offer a wide range of solutions supporting fleet management, reliability improvement, technical documentation, maintenance operations and complete airworthiness management. Furthermore, our back-office, offshore and on-site support teams are equipped to efficiently manage your assets using the leading MRO and airline fleet management software solutions.

Transitions

Our Transitions services ensure a seamless and compliant transfer of aviation assets between operators, owners, or at the end of lease terms. We provide full support throughout this phase, including pre-redelivery and delivery inspections, physical inspection, and pre-purchase asset reviews. Our services also cover records management and asset oversight, both onsite and offsite, ensuring all documentation is accurate, complete, and compliant.

End of Life

Our End of Life services ensure the safe and responsible management of aviation assets as they reach the end of their operational lifecycle. This phase includes detailed physical inspections to assess asset condition, technical documentation analysis to ensure compliance, accuracy, and strategic planning for scrapping or dismantling. We coordinate all related processes with a focus on compliance, environmental responsibility, and value recovery, ensuring efficient and sustainable decommissioning of assets
